

Are you protected against Tetanus, Diphtheria and Pertussis (whooping cough)?

Did you know that as an adult you should get a tetanus (Td) booster every 10 years?

You also need at least 1 dose of Tdap vaccine in your lifetime. Women should get a Tdap vaccine during every pregnancy to help protect the baby.

If you are not sure about your immunization status you may contact your physician's office, pharmacy or you can call Jefferson County Health Department at 920-674-7275.
